

# Turn financing into a loyalty loop

*Airline-branded financing + loyalty rewards, powered by ClarityPay.*

## Native

Airline owns the customer experience

## Simple

Reward value visible at every decision moment

## Modular

Loyalty layer sits on existing financing rails

### KEEP — unchanged

Underwriting · financing · repayment · servicing

### ADD — new layer

Loyalty ledger · earn rules · reward events · reversal · reporting

# Loyalty appears where it can change behavior

Airline brand throughout · **ClarityPay disclosed where legally required**

- 1 Reward is shown before the customer picks a payment method**  
*moves choice, not just perception*
- 2 Pending → posted is the only earn state the customer sees**  
*no reward maths at checkout*
- 3 Repayment behaviour is tied to keeping the reward**  
*loyalty reinforces credit performance*

# Earn simply. Post reliably. Reverse fairly.

- Earn is incremental to fare miles — financing never mints status.
- One loan, one reward account — the borrower's. Fare miles unaffected.
- Points cut the fare before the loan is written, never a live loan.

## Reversal rules

| Event                        | Base — unlocks at travel         | Bonus — unlocks at last payment |
|------------------------------|----------------------------------|---------------------------------|
| Cancelled before travel      | Cancelled while locked           | Cancelled while locked          |
| Partial refund before travel | Cut pro rata, stays locked       | Cut pro rata, stays locked      |
| Customer misses payments     | Kept - the flight was flown      | Never unlocks                   |
| Plan paid off                | Already unlocked                 | Unlocks, spendable              |
| Posting fails                | Retry, then reconcile within 24h |                                 |

*If a reversal lands on points already spent, the airline absorbs it below a threshold it sets.*

**Reward economics must never depend on whether the customer understands financing.**

# One loyalty layer across three systems

## AIRLINE

*Customer · booking · loyalty ID · member balance*

↓ booking + loyalty ID    ↑ pending / posted / reversed

## LOYALTY LAYER

*Earn · event ledger · post · reverse · reconcile*

↑ loan funded · refund · delinquency    ↓ reward status on statement

## CLARITYPAY

*Prequal · underwrite · finance · repay · service*

*Loyalty layer is ClarityPay-operated. The airline programme stays system of record for member balances.*

| Capability         | Airline          | ClarityPay      |
|--------------------|------------------|-----------------|
| Brand / UX         | Own              | Enable          |
| Loyalty ID         | Own              | Consume         |
| Booking data       | Own              | Required fields |
| Credit / repayment | —                | Own             |
| Reward ledger      | System of record | Events + status |
| Reward rules       | Configure        | Execute         |

## REUSABLE

Ledger · rules engine · APIs · events · reversal · reporting

## MERCHANT-SPECIFIC

Currency · earn rules · redemption · brand · customer policy

**Merchant-facing:** *airline funds the reward out of the merchant fee · one daily reward-and-finance reconciliation file · second merchant is configuration, not a rebuild.*

# Five decisions define the product

1

## Placement

Sits beside card, wallet and any incumbent pay-later; reward shown on our option.

---

*Two lenders can coexist.  
Reward is the wedge.*

2

## White-label

Airline owns UX and the loyalty relationship; ClarityPay visible only for required disclosures.

---

*Trust sits with the airline.*

3

## Reward trigger

Base unlocks after travel. Bonus unlocks at the last payment.

---

*Travel kills refunds. Completion rewards repayment.*

4

## Risk / reversal

Refunds reverse pro rata. Delinquency never claws back — the flight was flown.

---

*Earned by flying, not by paying.*

5

## Architecture

Reusable loyalty layer above existing financing — not a merchant-specific build.

---

*Next merchant is config.*

**TBD**

earn rate · reward currency · write-off threshold · promo funding
